

Privacy Policy

I appreciate you considering using my clock face. To ensure that you are aware of how I use your data please refer to the following document where you can find what data I use, how I use your data, and the control that you have over what data I collect.

Information That I use

Heart Rate Monitor

One of the features of my clock face is the heart rate monitor. I access the heart rate monitor of your watch in order to easily display your heart rate to you whenever you glance at your watch.

User's Today

Another feature of my clock face is importing some stats from today on your fitbit account. This data is used to display the number of steps you walked, and the amount of calories you burned during the day.

How I Use Your Data

Your data is collected simply for the purpose of displaying it to you on your clock face. I do not store any of your data or sell any of your data to third parties.

How to Control What Data I Have Access Too

If you are unwilling to give me access to your data, you can either delete the clock face from your watch, or deny the clock face permission to your heart rate, activity, or both. In order to deny permissions, you can go to the Fitbit watch face settings on your Fitbit mobile app. From there you can select my clock face, then select "See all details", and from there you can select "permissions". Once you have selected "permissions" you can deselect any permissions that you feel uncomfortable with sharing by swiping the slider towards the left. If the slider is already swiped left, then the clock face already does not have access to that permission.

Changes to This Policy

If I ever change this policy, it is your responsibility to check by accessing the [Privacy policy on my github repository](#)

How To Contact Me

If you have any questions about the Canadian Flag Clock Face, please email me at luke.dsouza4@gmail.com or visit <https://github.com/LMJD4/Canadian-Flag-Clock-Face/issues> and post an issue.
